I SEMESTER

Course Title	**CALCULUS AND LINEAR ALGEBRA for Electronics and communications Engineering Stream**			
Course Code	**23MATE11**		**CIE Marks**	**50**
Course Type	**Integrated**		**SEE Marks**	**50**
Teaching Hours/Week (L: T: P: S)	**2:2:2:0**		**Total Marks**	**100**
Total Hours of Pedagogy	**Theory**	**40 hours**	**Exam Hours**	**03**
	Practical	**10 to 12 slots**	**Credits**	**04**

Course objectives:

The goal of the course **Calculus and Linear Algebra for Electronics and communications Engineering stream** is to

- **Familiarize** the importance of calculus associated with one variable and two variables for Electronics and communications engineering.
- **Analyze** Electronics and communications engineering problems applying Ordinary Differential Equations.
- **Develop** the knowledge of Linear Algebra refereeing to matrices.

Teaching-Learning Process (General Instructions)

These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. In addition to the traditional lecture method, different types of innovative teaching methods may be adopted so that the delivered lessons shall develop students theoretical and applied mathematical skills.
2. State the need for Mathematics with Engineering Studies and Provide real-life examples.
3. Support and guide the students for self–study.
4. You will also be responsible for assigning homework, grading assignments and quizzes, and documenting students' progress.
5. Encourage the students for group learning to improve their creative and analytical skills.
6. Show short related video lectures in the following ways:
   - As an introduction to new topics (pre-lecture activity).
   - As a revision of topics (post-lecture activity).
   - As additional examples (post-lecture activity).
   - As an additional material of challenging topics (pre-and post-lecture activity).
   - As a model solution of some exercises (post-lecture activity).

Module-1

Differential Calculus:

Introduction to polar coordinates and curvature relating to Electronics and communications engineering.

Polar coordinates, Polar curves, angle between the radius vector and the tangent, angle between two curves. Pedal equations. Curvature and Radius of curvature - Cartesian,

Parametric, Polar and Pedal forms. Problems. **- 08 Hours**

Self-study: Center and circle of curvature, evolutes and involutes.

Applications: Communication signals, Manufacturing of microphones, and Image processing.

[Text 1: 4.7, 4.8, 4.10, 4.11]

(RBT Levels: L1, L2 and L3)

Module-2

Series Expansion and Multivariable Calculus:

Introduction to series expansion and partial differentiation in Electronics and communications engineeringapplications.

Taylor's and Maclaurin's series expansion for one variable (Statement only) – problems. Indeterminate forms-L'Hospital's rule. Problems.

Partial differentiation, total derivative-differentiation of composite functions. Jacobian and problems. Maxima and minima for a function of two variables. Problems. **-08 Hours**

Self-study: Euler's Theorem and problems. Method of Lagrange undetermined multipliers with single constraint.

Applications: Series expansion in communication signals, Errors and approximations, and vectorcalculus.

[Text 1: 4.4, 4.5, 5.2, 5.5, 5.6, 5.7, 5.11]

(RBT Levels: L1, L2 and L3)

Module-3

Ordinary Differential Equations (ODE's) of first order:

Introduction to first-order ordinary differential equations pertaining to the applications for Electronics and communications engineering.

Linear and Bernoulli's differential equations. Exact and reducible to exact differential equations– Integrating factor on $\frac{1}{N}\left(\frac{\partial M}{\partial y}-\frac{\partial N}{\partial x}\right)$ and $\frac{1}{M}\left(\frac{\partial N}{\partial X}-\frac{\partial M}{\partial y}\right)$. Applications of ODE's- Orthogonal trajectories, Newton's law of cooling.

Nonlinear differential equations: Introduction to general and singular solutions; Solvable for p only; Clairaut's equations, reducible to Clairaut's equations- Problems. **- 08 Hours**

Self Study: Applications of ODE's: L-R and C-R circuits. Solution of non-linear ODE by the method of solvable for x and y.

Applications: Flow of electricity, electro statistics and wave analysis.

[Text 1: 11.9, 11.10, 11.11, 11.12, 11.13, 11.14, 12.3, 12.6]

(RBT Levels: L1, L2 and L3)

Module-4

Integral Calculus:

Introduction to Integral Calculus Electronics and communications Engineering applications.

Multiple Integrals: Evaluation of double and triple integrals, evaluation of double integrals by change of order of integration, changing into polar coordinates.

Beta and Gamma functions: Definitions, properties, the relation between Beta and Gamma functions. Problems. **- 08 Hours**

Self-study: Applications to find Area and Volume by a double integral. Problems. Centre of gravity.

[Text 1: 7.1, 7.2, 7.5, 7.7(2)(i), 7.14, 7.15, 7.16]

Applications: Antenna and wave propagation, Calculation of optimum power in electrical circuits, field theory.

(RBT Levels: L1, L2 and L3)

Module-5

Linear Algebra:

Introduction of linear algebra related to Electronics and communications Engineering applications.

Elementary row transformation of a matrix, Rank of a matrix. Consistency and Solution of system of linear equations; Gauss-elimination method, Gauss-Jordan method and Approximate solution by Gauss-Seidel method. Eigen values and Eigenvectors-Rayleigh's power method to find the dominant Eigen value and Eigen vector. **-8 Hours**

Self Study: Solution of system of equations by Gauss-Jacobi iterative method. Inverse of a square matrix by Cayley- Hamilton theorem**.**

Applications: Network Analysis, Markov Analysis, Critical point of a network system. Optimum solution.

[Text 1: 2.7, 2.10, 2.13, 28.6, 28.7, 28.9]

(RBT Levels: L1, L2 and L3)

Teaching-Learning Process for all modules	**Chalk and Talk/PowerPoint presentation/YouTube videos.**

List of Laboratory experiments (2 hours/week per batch/ batch strength 15)10 lab sessions + 1 repetition class + 1 Lab Assessment

1	2D plots for Cartesian and polar curves
2	Finding angle between polar curves, curvature and radius of curvature of a given curve
3	Finding partial derivatives, Jacobian and plotting the graph
4	Applications to Maxima and Minima of two variables
5	Solution of first-order differential equation and plotting the graphs
6	Program to compute area, volume and centre of gravity
7	Evaluation of improper integrals
8	Numerical solution of system of linear equations, test for consistency and graphical representation
9	Solution of system of linear equations using Gauss-Seidel iteration
10	Compute eigen values and eigen vectors and find the largest and smallest eigen value by Rayleigh power method.

Course Outcomes:

After successfully completing the course, the students will be able to:

1. Apply the knowledge of calculus to solve problems related to polar curves and learn the notion of partial differentiation to compute rate of change of multivariate functions.
2. Solve first-order linear/nonlinear ordinary differential equations analytically using standard methods.
3. Understand the concept of change of order of integration and variables to evaluate multiple integrals and their usage in computing area and volume.

4. Make use of matrix theory for solving for system of linear equations and Compute eigen values and eigen vectors
5. Use the modern mathematical tools by PHYTHON software.

Evaluation Details:

EvaluationType		Component	Max Marks	Marks Reduced to	Min. Marks	EvaluationDetails
Theory Component	Internal Assessment Tests(IAT)	IAT-1	25	15	10	Average of two IATs, Scaled down to 15 marks
		IAT-2	25			
	Comprehensive Continuous Evaluations (CCE)	CCE-1	10	10		Any two Assessmentmet as per 22OB4.2 of regulations, Average of two CCEs, scaled Down to 10marks
		CCE-2	10			
	Total CIE -Theory			**25**	**10**	Scale down marks of IAT and CCE to25
Laboratory Component	PracticalandLabRecord	-	15	25	10	Conduction of experimnts and preparation of Lab records, etc
	LabTest	50	10			One test to be conducted after the completion of All lab experiments.
	TotalCIE –Practical			**25**	**10**	
TotalCIE(Theory+Lab)				**50**	**20**	
SEE			100	**50**	**18**	Conducted for 100 marks and scaled down to 50.
CIE + SEE				**100**	**40**
